CR Series TDR

- ... Solid state analog circuitry
- ... Triggered delay on release timing mode
- ... Compact size
- ... Relay output with SPST or SPDT contacts
- ... Timing selection: Fixed or knob adjustable
- ... Numerous models timing from 1 sec. to 600 secs.
- ... UL File # E96739 (M)
- ... CSA File #LR62586

Timing Mode: Input voltage must be applied continuously to operate the internal relay. Relay contacts transfer when the trigger input terminal is activated. The timing cycle begins when the trigger input terminal is deactivated. When the timing cycle is completed the relay will de-energize. The timing cycle may be reset to zero during the timing cycle by reactivating the trigger input terminal.

Definition of a part number for the Amperite CR Series Time Delay Relay.

Example:

115 A NO R 1 -120 X C

↑ ↑ ↑ ↑ ↑ ↑ ↑ ↑

A B C D E F G H

A: Denotes nominal input voltage.

Voltages Available: 12, 24 & 115V AC; 12, 24, 48 & 110V DC. **Custom Voltages are available.**

B: Denotes type of input current required for operation:

A = AC - Alternating Current

D = DC - Direct Current

C: Denotes contact form:

NO = SPST - 1 form A (normally open)

C = SPST - 1 form B (normally closed)

SPDT = 1 form C (single pole, double throw)

D: Denotes trigger reset function of CR Series TDR.

E&F: Denotes range of knob adjustability for timing (in seconds) where:

E = Minimum time delay, F = Maximum time delay for adjustable TDR'S.

Note: 1.) Ranges available: 1 - 120, 120 - 240, 240 - 480 & 480 - 600 secs. Custom Timing is available.

2.) Both values (E & F) can be replaced by a single value for a factory preset time delay in seconds from 1 through 600 seconds

G: Denotes form of termination - blank = .110 male electro-plate solder terminals (standard), X = .250 male quick connect terminals (optional), S = screw terminals (optional).

H: Denotes use of solid state analog circuitry of CR Series.
