## DUO-TOUCH<sup>®</sup> SG Two-Hand Control Module

*Model AT-FM-10K, for use with two actuating devices*

### Features

- Diverse-redundant microcontrollers
- Monitors two Banner STB Self-Checking Optical Touch Buttons, or two mechanical push buttons
- Two redundant, forced-guided (mechanically linked) output contacts rated at 6 A
- Two auxiliary solid-state outputs (NPN and PNP), plus auxiliary N.C. relay output
- Feedback input monitors external machine control elements
- 5 indicator LEDs for Power, Fault, Input 1, Input 2 and Output
- 24V ac/dc operation
- DIN-rail-mountable 22.5 mm-wide housing with removable terminal blocks
- 500 ms (max.) simultaneity requirement for touch-/push button operation

### Description

A DUO-TOUCH SG Two-Hand Control Safety Module may be used with:

- Two Banner STB Self-Checking Optical Touch Buttons, each with one normally open and one normally closed relay output contact, or
- Two Banner STB Self-Checking Optical Touch Buttons, each with two current-sourcing PNP outputs, or
- Two mechanical push buttons, each with one normally open and one normally closed contact (Form C contact)

If the machine operator removes one or both hands from the actuating device(s), the Duo-Touch SG relays de-energize, causing the output contacts to open. The relays will not re-energize until both actuating devices are deactivated and then simultaneously reactivated.

**The Duo-Touch SG Two-Hand Control Kit system has been designed to meet:**

- Type IIIC requirements of ISO 13851 (EN 574) Safety of Machinery – Two-Hand Control Devices, and
- Category 4 requirements of ISO 13849-1 (EN 954-1) Safety of Machinery – Safety-Related Parts of Control Systems – Part 1: General Principles of Design

The Safety Module's output signal consists of two sets of redundant, forced-guided (mechanically linked) contacts (see Figure 4). Circuitry within the Safety Module monitors these internal contacts and prevents an output signal from occurring if a fault is detected. A feedback loop is offered for monitoring the status of the machine control elements.

**DUO-TOUCH SG Safety Module LED Indicators** (see Figure 1)

<b>Power On:</b>	ON when power is applied
<b>Fault:</b>	ON if simultaneity is not met or external wiring fault Flashing when internal fault condition is detected
<b>Input 1 (2) Status:</b>	ON if touch button is activated OFF when button is not activated Flashing if external wiring fault is detected
<b>Output Status:</b>	ON if both relays (K1 and K2) are energized Flashing if feedback error has occurred

## Repairs

**NOTE: Do not attempt any repairs to the DUO-TOUCH SG Two-Hand Control Module. It contains no field-replaceable components. Return it to the factory for warranty repair or replacement.**

If it ever becomes necessary to return a DUO-TOUCH SG Safety Module to the factory, please do the following:

- 1) Contact the Banner Factory Application Engineering Group at the address or at the numbers listed at the bottom of the back page. They will attempt to troubleshoot the system from your description of the problem. If they conclude that a component is defective, they will issue an RMA (Return Merchandise Authorization) number for your paperwork, and give you the proper shipping address.
- 2) Pack the component carefully. Damage which occurs in return shipping is not covered by warranty.

### CAUTION ... Abuse of Module After Failure

If an internal fault has occurred and the Module will not reset, **do not tap, strike, or otherwise attempt to correct the fault by a physical impact to the housing.** An internal relay may have failed in such a manner that its replacement is required.

**If the Module is not immediately replaced or repaired, multiple simultaneous failures may accumulate such that the safety function can not be guaranteed.**
