

Push-to-x Handsets - Unamplified PTX Handsets

Clarity's Walker PTX series of handsets are designed for the user who requires private conversation. The handsets are ideal for noisy environments, or when an outgoing transmit signal needs to be stopped. The PTX series of handsets can be manufactured using any one of the following transmitters: carbon, electret, and dynamic. The PTX handset series is also available with the NoiseCensor® transmitter.

Clarity offers three basic versions:

PUSH-TO-TALK HANDSETS (PTT)

Allows the user to initiate transmissions by pressing the bar switch

PUSH-TO-MUTE HANDSETS (PTM)

Allows the user to stop transmissions by pressing the bar switch

PUSH-TO-SIGNAL (PTS)

Allows the user to initiate special phone functions such as switching to a two-way radio
