"KNA3-RS" safety relay (45 mm)

- "Emergency stop" and "mobile guard monitoring" functions
- "CE" conforming product / BG approved
 Control device with one or two channels
 Safety via redundancy and self-checking

- Integrity check on control devices
 3 "N/O" safety contacts with linked contacts 6 A / 250 ~
 1 "N/C" signalling contact
 Separate return loop

- Can be used to obtain level 4 according to NF.EN 954-1

Example: KNA3-RS safety relay: 85 100 434

Control devices:

Depending on the degree of safety required, KNA3-RS can receive the following components as inputs:

- emergency stop pushbuttons with two contacts (Y11-Y12 and Y21-Y22)
- position sensors (limit switches) with one or two contacts (Y11-Y12 and Y21-Y22)
- pushbutton for start or validation (Y1-Y2)

A positive break operation device must be used if a single contact is used

To increase the degree of safety, one "N/C" auxiliary contact per power contactor is wired on terminals X1-X2 to ensure selfchecking in this part of the installation.

Control devices:

The KNA3-RS has three "N/O" safety contacts (13-14/23-24/33-34) and one "N/C" signalling contact (41-42). One or more control devices may be wired up to the breaking capacity of the safety contacts: 1500 VA. However, to limit internal heating in the KNA3-RS, it is advisable not to exceed 10 A thermal for all three contacts. The signalling contact cannot be used as a safety contact.

The signalling contact can be wired on a PLC input or integrated into a fault signalling system.

Extending the number of contacts:

The number of contacts of the KNA3-RS can be extended and the breaking capacity thus increased. To do this, use the KZE3-XS (see page 11/20).
