ELC Overview

ELC Modules

The Eaton Logic Controller (ELC) is our latest offering into the PLC (Programmable Logic Controller) marketplace. Using the latest technology, this reduced sized ELC with its abundant module selection will provide a "Just Right" concept of providing only what you want for the price you need.

- **Size** — Providing large PLC features/functions in a small 1" package. ELC is 1/3 the size of past PLC products (D50 model), offering identical and even a larger feature set than the D50. ELC can provide 46 I/O in the space that a D50 could provide 14 I/O.
- **Flexibility** — ELC controllers can handle I/O counts from 10 I/O to 256 I/O using the same controller. ELC eliminates the process of counting I/O and deciding which controller to use, ELC is the only one needed. ELC modules come in many flavors of I/O from modules containing 4 in / 4 out to modules containing 8 in / 8 out. ELC is not a rack-based system — it simply mounts to a DIN rail. Add modules by simply snapping them into the mating connectors and closing the attached locks.
- **Large PLC Features** — ELC has the feature set of larger PLCs, from its multiple communications ports, remote I/O ability, data storage, high speed counter, high speed pulse outputs, interrupts, timer resolution to 1 ms, PID, plus much more.
- **Software** — ELCSoft, the software, configures the entire line of ELC controllers. Economically priced, it programs in standard ladder logic and sequential function chart programming. It will aid in knowing what registers are in use and what modules are attached to the ELC. It monitors the runtime application, allows forcing (except basic), and entering values. Software wizards aid programming of remote I/O, standard communications and PIDs.
- **Power of One** — ELC communicates easily to Eaton type MVX Adjustable Frequency Drives eliminating the need to operate drives by analog voltage/current or digital I/O. ELC can access all of the parameters in the MVX by serial communications. ELC communicates to *IT* I/O through the Modbus TCP gateway. This allows ELC to control the *IT* I/O if local control is desired. This will also allow *IT* I/O to be used in communicating MCC applications where the ELC can be either a DeviceNet™, PROFIBUS®, or Modbus®TCP communicating MCC. ELC communicates to PowerNet™ Modbus products, allowing ELC connectivity to Switchgear and PowerNet applications.

ELC Controllers

The ELC family offers four styles of controllers. These controllers offer combinations of the following features:

- High speed pulse capture and high speed pulse output on all controllers.
- Interrupts.
- Broad module selection ac/dc in, relay/transistor out.
- Wide selection of analog in, out, combined, thermocouple or RTD Platinum.
- Over 200 instructions to choose from: Floating point math, communications, hex, decimal, octal, BCD, ASCII conversion, 1, 4, 8, 16, 32, bit manipulations, logical, block move, block compare, retentive data storage, time base from clock/calendar.
- Two Modbus (ASCII or RTU) serial ports: 1 slave only, 1 master/slave.
- Network communications on Modbus TCP, DeviceNet and PROFIBUS.
- ELC controller can be wired for remote I/O communications (except the PB model).

ELC Controllers/Modules

ELC Modules

ELC Expansion Modules

ELC expansion modules provide the correct amount of I/O for application solutions. Choose 4, 8 or 16 I/O. Any number of expansion modules can be added to the ELC processor to create 256 I/O (128 Inputs and 128 Outputs maximum).

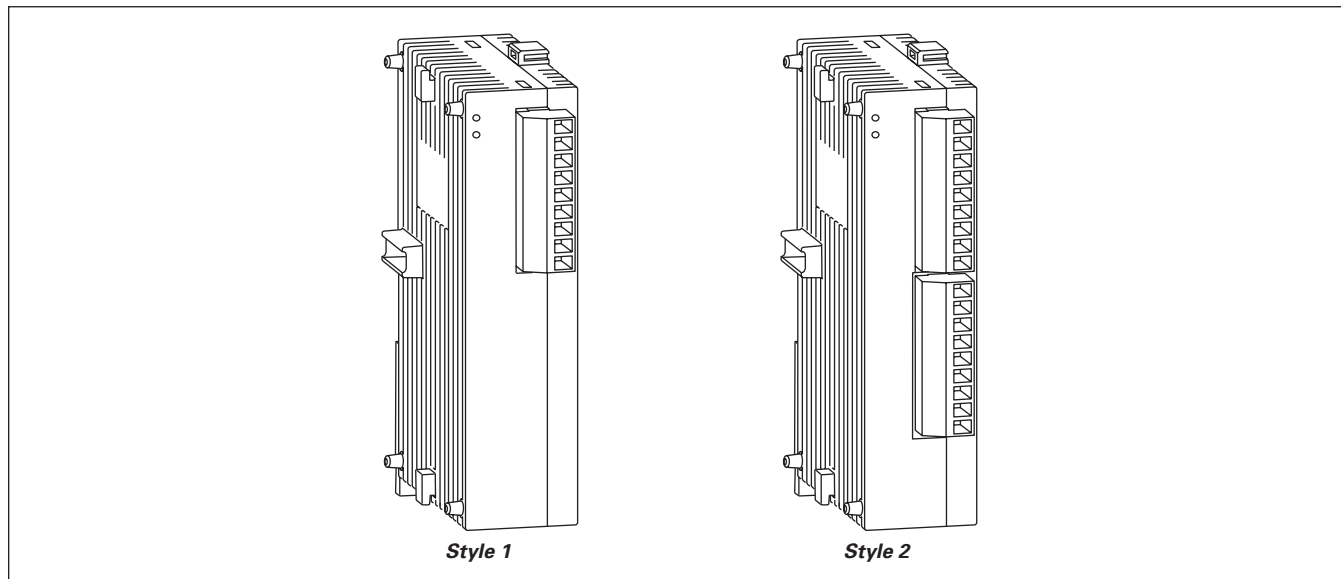

Figure 34.1-4. ELC Expansion Modules

ELC Specialty Modules

In addition to the expansion I/O, specialty modules like Analog In, Analog Out, Platinum Temperature, Thermocouple, DeviceNet, PROFIBUS DP and Switch Module, etc. can be added. Use the ELC-485APTR to easily connect to the RS-485 port of MVX drive, ELC controllers and other devices.

Technical Data and Specifications

Table 34.1-4. ELC Application Data

Description	Specification
Power Supply Voltage	ELC: 24 Vdc (-15% – 20%) (With dc input reverse polarity protection), Expansion Unit: supplied by the ELC
Power Consumption	3 – 6 W
Insulation Resistance	> 5 MΩ at 500 Vdc (Between all inputs/outputs and earth)
Noise Immunity	ESD: 8 kV Air Discharge EFT: Power Line: 2 kV, Digital I/O: 1 kV, Analog and Communication I/O: 250 V Damped-Oscillatory Wave: Power Line: 1 kV, Digital I/O: 1 kV RS: 26 MHz – 1 GHz, 10V/m
Grounding	The diameter of grounding wire cannot be smaller than the wire diameter of terminals L and N (All ELC units should be grounded directly to the ground pole).
Environment	Operation: 0° – 55°C (Temperature), 50 – 95% (Humidity), Pollution degree 2; Storage: -25° – 70°C (Temperature), 5 – 95% (Humidity)
Vibration / Shock Resistance	Standard: IEC1131-2, IEC 68-2-6 (TEST Fc) / IEC1131-2 and IEC 68-2-27 (TEST Ea)
Weight (approx.) (g)	158
Certifications	UL® 508, cUL®, CE

Table 34.1-5. DC Input Point Electrical Specifications

Description	Specification
Input Type	dc (SINK or SOURCE)
Input Current	24 Vdc 5 mA
Active Level	OFF → ON, Above 16 Vdc ON → OFF, Below 14.4 Vdc
Response Time	About 10 ms (An adjustment range of 0 – 10,000 ms could be selected through D1020 and D1021)

Table 34.1-6. Output Point Electrical Specifications

Output Type	Relay – R	Transistor – T	
Current Specification	1.5A/1 point (5A/COM)	0.3A/1 point @ 40°C; When the output of Y0 and Y1 is high-speed pulse, Y0 and Y1 = 30 mA	
Voltage Specification	Below 250 Vac, 30 Vdc	30 Vdc	
Maximum Loading	75 VA (Inductive)	9W/1 point	When the output of Y0 and Y1 is high-speed pulse, Y0 and Y1 = 0.9 W (Y0 = 32 kHz, Y1 = 10 kHz), Y0 can be 50 kHz using D registers.
	90 W (Resistive)		
Response Time	Adjustable 0 – 15 ms, default is 10 ms	OFF → ON 20 μs ON → OFF 30 μs	Y0 and Y1 are specified points for high-speed pulse

ELC Graphic Panels

ELC Graphic Panels

Product Description

ELC Graphic Panels are simple to program and easily connect to ELC products. ELC graphic panels make modifying an application quick and easy. ELC graphic panels also connect to Cutler-Hammer® MVX drives, IQ Modbus meters and many other devices. With over 30 objects that can be placed anywhere on the display, these panels also communicate to other major controllers. These graphic panels have two serial ports which can be used simultaneously to communicate. Transfer applications to or from these graphic panels using the handy transfer module. Ten programmable functions keys provide easy to change pages, input numeric values, enter alpha-numeric passwords, set, reset and more. Create alarms, password protect, import bitmaps, and use many different fonts.

Protocols Supported

- Eaton D50/D32LT, D320.
- Eaton ELC.
- Eaton MVX ASCII.
- Eaton MVX RTU.
- Modbus ASCII.
- Modbus RTU.
- AB DF1.
- Mitsubishi FX Series.
- Mitsubishi FX2N Series.
- Koyo K-Sequence.
- LG 200S.
- OMRON C-Series.
- Siemens® 57-200 Series.
- ASCII Slave Mode.
- And more...

ELC Software

ELCSoft Programming Software

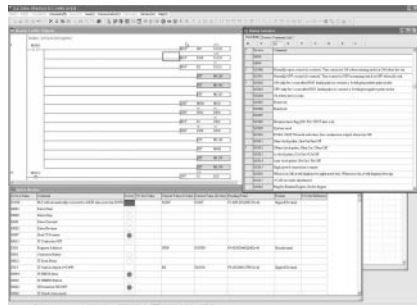

ELCSoft Programming Software configures all ELC controllers. With ELCSoft, applications can be created, edited, monitored, forced, etc. Move programs from one controller to a different one with ease.

Requirements:

- **Operating Systems** — Windows® 98, Windows ME, Windows 2000, Windows XP.
- **Hard Drive** — At least 100M bytes.
- **RAM** — At least 256M bytes.

ELCSoft Ladder Diagram Mode

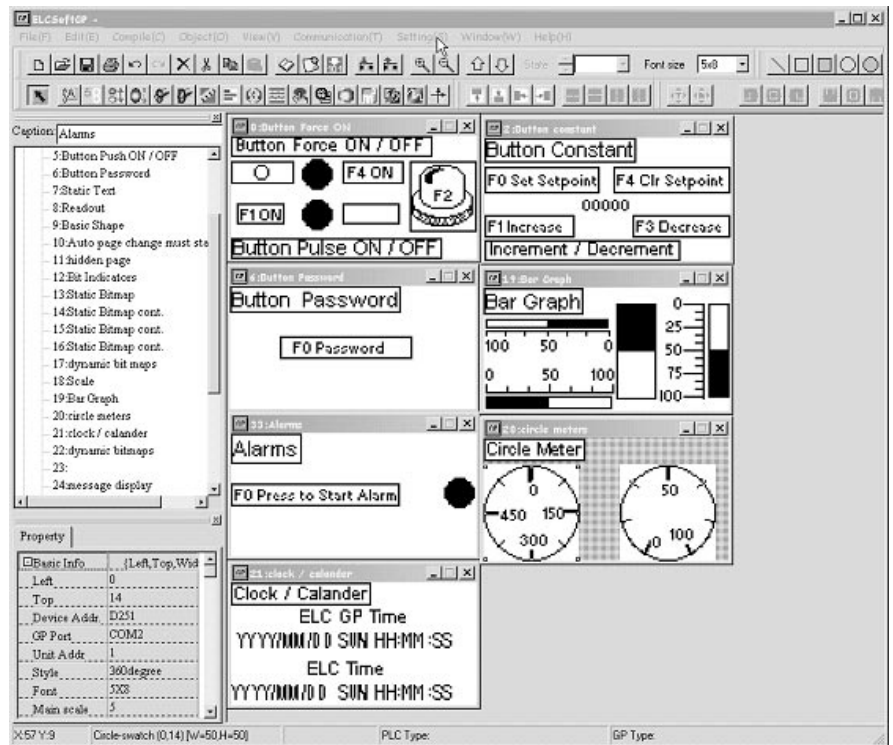

ELCSoft Editor

ELCSoftGP Programming Software

ELCSoftGP Programming Software configures all ELC graphic panels. With ELCSoftGP, applications can be created, edited, downloaded, uploaded, etc. Move programs from one controller to a different one with ease.

Requirements:

- **Operating Systems** — Windows 98, Windows ME, Windows 2000, Windows XP.
- **Hard Drive** — At least 100M bytes.
- **RAM** — At least 256M bytes.

ELC-GPXFERMOD

Transfer programs to or from ELC-GPxx units. These devices can be write protected to maintain program integrity.

Figure 34.1-9. ELC — GPXFERMOD — Approximate Dimensions in Inches (mm)

ELC-HHP

ELC-HHP is an easy-to-use, hand-held programming tool for ELC controllers when a PC is not available. With ELC-HHP, applications can be programmed directly with the attached keypad. Or uploaded from an ELC, saved, and transferred to a different ELC. Or downloaded from a PC and transferred to other ELCs. No need for outlets when using the ELC-HHP since it draws its power from either the ELC or the PC through the attached cable. Monitor applications when a PC is not available.

Product Family Overview

EZ Intelligent Relays Product Family Overview

**EZ Intelligent Relays Product Family**

The EZ intelligent relays bring timers, relays, counters, special functions, inputs and outputs into one compact device that is easily configured. The EZ family of products provides exceptional levels of flexibility together with substantial savings in commissioning time and effort.

The EZ intelligent relays are available in more than 32 different styles that support from 12 I/O up to 320 I/O points providing the ideal solution for lighting, energy management, industrial control, watering, pump control, HVAC and home automation.

Once EZ products are installed, changes are easily accomplished through front panel programming, eliminating the need to change wiring and wiring diagrams increasing the savings realized.

Other terms often used for intelligent relay are relay replacer, control relay and smart relay.

Application Description

Generally where multiple relays, timers and pushbuttons are used there is an opportunity to evaluate switching to the EZ Intelligent Relays. Applications span residential, commercial and industrial installations. Typical applications are:

- Car washes.
- Automatic door control.
- Commercial lighting.
- Residential lighting.
- Exterior lighting.
- Pump control, 12 Vdc automotive control.
- Greenhouse control.
- Crane control.
- Machinery.
- Paper/pulp.
- Elevator control.
- Livestock feed/gate control.
- Irrigation control.
- Cart chargers.
- Heating and air conditioning.

EZ 500/700/800/EZD Intelligent Relays

EZ 500/700/800/EZD Intelligent Relays

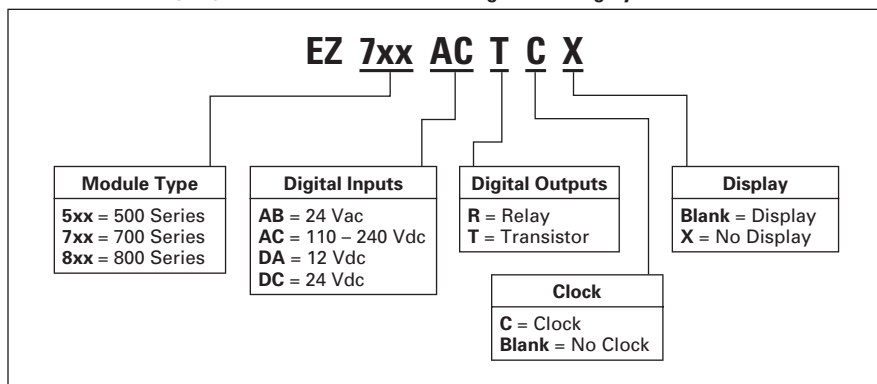

EZ 500/700/800/EZD Intelligent Relays

EZD Series — for controlling large-scale applications with up to 320 input/output signals using powerful visualization functions. The EZD display can be linked to the EZ500/700/800 models to provide an enhanced operator interface. Panel mounted.

The **EZ-NET** integrated network called provides easy and inexpensive linking of up to eight EZ800/EZD devices over a distance of up to 1000 meters. The EZ and EZD devices can run their own program or be used as a distributed input/output module.

Product Description

Four families make up the EZ Intelligent Relay product line.

EZ500 Series — for controlling small applications with up to 12 input/output signals. Models are available with and without displays. DIN rail mounted.

EZ700 Series — for controlling medium-sized applications with up to 40 input/output signals. DIN rail mounted.

EZ800 Series — for controlling large-scale applications with up to 320 input/output signals. Models are available with and without displays. DIN rail mounted.

EZ/EZD Expansion Modules

EZ/EZD Expansion Modules

EZ/EZD Expansion Modules

Product Description

Expansion modules are available for increasing the input/output of the EZ700/800 and EZD intelligent relays to 24 inputs and up to 16 outputs. Expansion modules can be mounted directly to the EZ/EZD unit or up to 98 ft. (30 m) away using coupling module EZ200-EZ.

EZ/EZD Communication Modules

EZ204-DP Communication Module

Product Description

Four modules are available for easily connecting to world-standard networks. The communication modules can be used with the EZ700/800 and EZD intelligent relays.

Available communication modules support:

- PROFIBUS-DP.
- AS-I (Actuator Sensor Interface) networks.
- CANopen.
- DeviceNet.

All modules act as a gateway and operate exclusively as a slave station on the network.

EZ Software

EZSoft Software

Product Description

The EZSoft software is used to program all of the EZ and EZD controllers and displays. The Windows-based software provides straightforward circuit diagram input and editing and the diagrams can be displayed in the format desired. When EZ800 and EZD controllers are connected using EZ-NET, all connected devices can be accessed and their programs loaded from a single controller.

EZSoft includes an integrated offline simulation tool that allows users to test a circuit diagram before commissioning.
