AML76F10T01P

AML76 Series Switch Guard for Rectangular Pushbuttons

Features

- Button cannot be operated when switch guard cover is closed, preventing accidental operation
- Wire lock-down feature further prevents unintentional actuation of the switch
- Lamps can be replaced with the switch guard attached, without special tools, saving maintenance time
- Shock resistant construction, for long, maintenance-free life

Description

The switch guard cover is clear, polycarbonate thermoplastic through which the button is easily visible. The word "lift" is molded onto the top front edge of the guard. The bracket is bright-finished stainless steel.

The switch guard may be assembled to the AML pushbutton before the switch is installed in a panel. Or, the guard can be assembled to a pushbutton already mounted in a panel, providing the wiring is sufficiently slack to raise the switch bezel above the panel; and if there is sufficient clearance with adjacent units. AML switch guards may be mounted in horizontal or vertical matrices. A wire lock-down feature, using .020 inch diameter locking wire, may be used as an additional protection.
