

### FEATURES

**Excellent Speed:** 8 V/ $\mu$ s Typ  
**Low Noise:** 11 nV/ $\sqrt{\text{Hz}}$  @ 1 kHz Max  
**Unity-Gain Stable**  
**High Gain Bandwidth:** 6.5 MHz Typ  
**Low Input Offset Voltage:** 0.8 mV Max  
**Low Offset Voltage Drift:** 4  $\mu$ V/ $^{\circ}$ C Max  
**High Gain:** 500 V/mV Min  
**Outstanding CMR:** 105 dB Min  
**Industry Standard Quad Pinouts**

### GENERAL DESCRIPTION

The OP471 is a monolithic quad op amp featuring low noise, 11 nV/ $\sqrt{\text{Hz}}$  Max @ 1 kHz, excellent speed, 8 V/ $\mu$ s typical, a gain bandwidth of 6.5 MHz, and unity-gain stability.

The OP471 has an input offset voltage under 0.8 mV and an input offset voltage drift below 4  $\mu$ V/ $^{\circ}$ C, guaranteed over the full military temperature range. Open-loop gain of the OP471 is over 500,000 into a 10 k $\Omega$  load ensuring outstanding gain accuracy and linearity. The input bias current is under 25 nA limiting errors due to signal source resistance. The OP471's CMR of over 105 dB and PSRR of under 5.6  $\mu$ V/V significantly reduce errors caused by ground noise and power supply fluctuations.

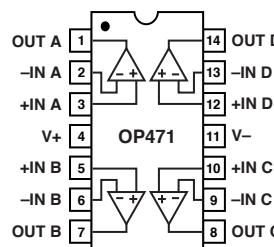

The OP471 offers excellent amplifier matching which is important for applications such as multiple gain blocks, low-noise instrumentation amplifiers, quad buffers and low-noise active filters.

The OP471 conforms to the industry standard 14-lead DIP pinout. It is pin-compatible with the LM148/LM149, HA4741, RM4156, MC33074, TL084 and TL074 quad op amps and can be used to upgrade systems using these devices.

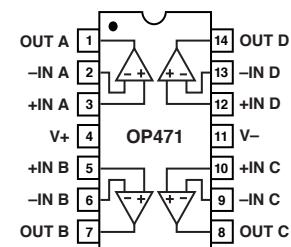

For applications requiring even lower voltage noise the OP470 with a voltage density of 5 nV/ $\sqrt{\text{Hz}}$  Max @ 1 kHz is recommended.

### PIN CONFIGURATIONS

14-Lead  
Hermetic Dip  
(Y-Suffix)

14-Lead  
Plastic Dip  
(P-Suffix)

16-Lead SOIC  
(S-Suffix)

### NOTES

<sup>1</sup>Absolute Maximum Ratings apply to packaged parts, unless otherwise noted.

<sup>2</sup>The OP471's inputs are protected by back-to-back diodes. Current limiting resistors are not used in order to achieve low noise performance. If differential voltage exceeds  $\pm 1.0$  V, the input current should be limited to  $\pm 25$  mA.

| Package Type            | $\theta_{JA}^*$ | $\theta_{JC}$ | Unit               |
|-------------------------|-----------------|---------------|--------------------|
| 14-Lead Hermetic DIP(Y) | 94              | 10            | $^\circ\text{C/W}$ |
| 14-Lead Plastic DIP(P)  | 76              | 33            | $^\circ\text{C/W}$ |
| 16-Lead SOIC (S)        | 88              | 23            | $^\circ\text{C/W}$ |

\* $\theta_{JA}$  is specified for worst-case mounting conditions, i.e.,  $\theta_{JA}$  is specified for device in socket for TO, CERDIP, PDIP packages;  $\theta_{JA}$  is specified for device soldered to printed circuit board for SO packages.

### CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although the OP471 features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high-energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.
