

Features

- EE Programmable 65,536 x 1-, 131,072 x 1-, 262,144 x 1-, 524,288 x 1-, 1,048,576 x 1- and 2,097,152 x 1-bit Serial Memories Designed to Store Configuration Programs for Altera® FLEX® and APEX™ FPGAs (Device Selection Guide Included)
- Available as a 3.3V (±10%) and 5.0V (±5% Commercial, ±10% Industrial) Version
- In-System Programmable (ISP) via 2-wire Bus
- Simple Interface to SRAM FPGAs
- Compatible with Atmel AT6000, AT40K and AT94K Devices, Altera FLEX, APEX Devices, ORCA® FPGAs, Xilinx® XC3000, XC4000, XC5200, Spartan®, Virtex™ FPGAs, Motorola MPA1000 FPGAs
- Cascadable Read-back to Support Additional Configurations or Higher-density Arrays
- Very Low-power CMOS EEPROM Process
- Programmable Reset Polarity
- Available 8-lead PDIP, 20-lead PLCC and 32-lead TQFP Packages (Pin Compatible Across Product Family)
- Emulation of Atmel's AT24CXXX Serial EEPROMs
- Low-power Standby Mode
- High-reliability
 - Endurance: 100,000 Write Cycles
 - Data Retention: 90 Years for Industrial Parts (at 85°C) and 190 Years for Commercial Parts (at 70°C)
- Green (Pb/Halide-free/RoHS Compliant) Package Options Available

1. Description

The AT17A series FPGA configuration EEPROMs (Configurators) provide an easy-to-use, cost-effective configuration memory for Field Programmable Gate Arrays. The AT17A series device is packaged in the 8-lead PDIP⁽¹⁾, 20-lead PLCC and 32-lead TQFP, see [Table 1-1](#). The AT17A series configurator uses a simple serial-access procedure to configure one or more FPGA devices. The user can select the polarity of the reset function by programming four EEPROM bytes. These devices also support a write-protection mechanism within its programming mode.

Note: 1. The 8-lead LAP, PDIP and SOIC packages for the AT17LV65A/128A/256A do not have an A label. However, the 8-lead packages are pin compatible with the 8-lead package of Altera's EEPROMs, refer to the AT17LV65/128/256/512/010/002/040 datasheet available on the Atmel web site for more information.

The AT17A series configurators can be programmed with industry-standard programmers, Atmel's ATDH2200E Programming Kit or Atmel's ATDH2225 ISP Cable.

8. AT17A Series Reset Polarity

The AT17A series configurator allows the user to program the polarity of the RESET/ \overline{OE} pin as either RESET/ \overline{OE} or $\overline{RESET/OE}$. This feature is supported by industry-standard programmer algorithms.

9. Programming Mode

The programming mode is entered by bringing $\overline{SER_EN}$ Low. In this mode the chip can be programmed by the 2-wire serial bus. The programming is done at V_{CC} supply only. Programming super voltages are generated inside the chip.

10. Standby Mode

The AT17LV65A/128A/256A enters a low-power standby mode whenever nCS is asserted High. In this mode, the configurator consumes less than 50 μA of current at 3.3V (100 μA for the AT17LV512A/010A/002A). The output remains in a high-impedance state regardless of the state of the RESET/ \overline{OE} input.

11. Absolute Maximum Ratings*

Operating Temperature.....	-40°C to +85°C
Storage Temperature	-65°C to +150°C
Voltage on Any Pin with Respect to Ground	-0.1V to $V_{CC} + 0.5V$
Supply Voltage (V_{CC})	-0.5V to +7.0V
Maximum Soldering Temp. (10 sec. @ 1/16 in.).....	260°C
ESD ($R_{ZAP} = 1.5K, C_{ZAP} = 100 pF$).....	2000V

*NOTICE: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those listed under operating conditions is not implied. Exposure to Absolute Maximum Rating conditions for extended periods of time may affect device reliability.

- Notes:
- Currently, there are two types of low-density configurators. The new version will be identified by a "B" after the datacode. The "B" version is fully backward-compatible with the original devices so existing customers will not be affected. The new parts no longer require a MUX for ISP. See programming specification for more details.
 - Use 64-Kbit density parts to replace Altera EPC1064.
 - Use 256-Kbit density parts to replace Altera EPC1213.
 - Use 512-Kbit density parts to replace Altera EPC1441.
 - Use 1-Mbit density parts to replace Altera EPC1
 - Use 2-Mbit density parts to replace Altera EPC2. Atmel AT17LV002A devices do not support JTAG programming; Atmel AT17LV002A devices use a 2-wire serial interface for in-system programming.
 - For operating voltage of 5V ±10%, please refer to the 5V ±10% AC and DC Characteristics.
