

1.4MHz, Low Power CMOS Operational Amplifiers

The ICL761X series is a family of CMOS operational amplifiers. These devices provide the designer with high performance operation at low supply voltages and selectable quiescent currents, and are an ideal design tool when ultra low input current and low power dissipation are desired.

The basic amplifier will operate at supply voltages ranging from $\pm 1V$ to $\pm 8V$, and may be operated from a single Lithium cell.

A unique quiescent current programming pin allows setting of standby current to 1mA, 100 μ A, or 10 μ A, with no external components. This results in power consumption as low as 20 μ W. The output swing ranges to within a few millivolts of the supply voltages.

Of particular significance is the extremely low (1pA) input current, input noise current of 0.01pA/ $\sqrt{\text{Hz}}$, and $10^{12}\Omega$ input impedance. These features optimize performance in very high source impedance applications.

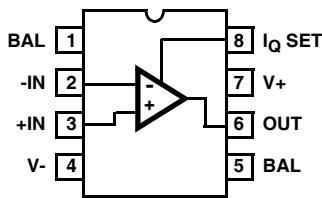

The inputs are internally protected. Outputs are fully protected against short circuits to ground or to either supply.

AC performance is excellent, with a slew rate of 1.6V/ μ s, and unity gain bandwidth of 1MHz at $I_Q = 1\text{mA}$.

Because of the low power dissipation, junction temperature rise and drift are quite low. Applications utilizing these features may include stable instruments, extended life designs, or high density packages.

Pinouts

ICL7611, ICL7612
(8 LD PDIP, 8 LD SOIC)
TOP VIEW

Features

- Wide Operating Voltage Range $\pm 1V$ to $\pm 8V$
- High Input Impedance $10^{12}\Omega$
- Programmable Power Consumption Low as 20 μ W
- Input Current Lower Than BIFETs 1pA (Typ)
- Output Voltage Swing V+ and V-
- Input Common Mode Voltage Range Greater Than Supply Rails (ICL7612)
- Pb-Free Plus Anneal Available (RoHS Compliant)

Applications

- Portable Instruments
- Telephone Headsets
- Hearing Aid/Microphone Amplifiers
- Meter Amplifiers
- Medical Instruments
- High Impedance Buffers

Ordering Information

PART NUMBER	PART MARKING	TEMP. RANGE (°C)	PACKAGE	PKG. DWG. #
ICL7611DCBA	7611 DCBA	0 to +70	8 Ld SOIC (150 mil)	M8.15
ICL7611DCBAZ (Note)	7611 DCBAZ	0 to +70	8 Ld SOIC (150 mil) (Pb-free)	M8.15

ICL7612DCBAZ-T (Note)	7612 DCBAZ	0 to +70	8 Ld SOIC (150 mil) Tape and Reel (Pb-free)	M8.15
ICL7612DCPA	7612 DCPA	0 to +70	8 Ld PDIP	E8.3
ICL7612DCPAZ (Note)	7612 DCPAZ	0 to +70	8 Ld PDIP* (Pb-free)	E8.3

*Pb-free PDIPs can be used for through hole wave solder processing only. They are not intended for use in Reflow solder processing applications.
 NOTE: Intersil Pb-free plus anneal products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate termination finish, which are RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

Absolute Maximum Ratings

Supply Voltage V+ to V-	18V
Input Voltage	V- -0.3 to V+ +0.3V
Differential Input Voltage (Note 1)	[(V+ +0.3) - (V- -0.3)]V
Duration of Output Short Circuit (Note 2)	Unlimited

Operating Conditions

Temperature Range	
ICL761XC	0°C to +70°C

Thermal Information

Thermal Resistance (Typical, Note 3)	θ_{JA} (°C/W)
PDIP Package*	130
SOIC Package	170
Maximum Junction Temperature (Plastic Package)	+150°C
Maximum Storage Temperature Range	-65°C to +150°C
Pb-free reflow profile	see link below http://www.intersil.com/pbfree/Pb-FreeReflow.asp

*Pb-free PDIPs can be used for through hole wave solder processing only. They are not intended for use in Reflow solder processing applications.

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

1. Long term offset voltage stability will be degraded if large input differential voltages are applied for long periods of time.
2. The outputs may be shorted to ground or to either supply, for $V_{SUPPLY} \leq 10V$. Care must be taken to insure that the dissipation rating is not exceeded.
3. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

Electrical Specifications $V_{SUPPLY} = \pm 5V$, Unless Otherwise Specified.

Schematic Diagram

Dual-In-Line Plastic Packages (PDIP)

NOTES:

1. Controlling Dimensions: INCH. In case of conflict between English and Metric dimensions, the inch dimensions control.
2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
3. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication No. 95.
4. Dimensions A, A1 and L are measured with the package seated in JEDEC seating plane gauge GS-3.
5. D, D1, and E1 dimensions do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 inch (0.25mm).
6. E and e_A are measured with the leads constrained to be perpendicular to datum $[C]$.
7. e_B and e_C are measured at the lead tips with the leads unconstrained. e_C must be zero or greater.
8. B1 maximum dimensions do not include dambar protrusions. Dambar protrusions shall not exceed 0.010 inch (0.25mm).
9. N is the maximum number of terminal positions.
10. Corner leads (1, N, N/2 and N/2 + 1) for E8.3, E16.3, E18.3, E28.3, E42.6 will have a B1 dimension of 0.030 - 0.045 inch (0.76 - 1.14mm).
