

LM136-2.5/LM236-2.5/LM336-2.5V Reference Diode

General Description

The LM136-2.5/LM236-2.5 and LM336-2.5 integrated circuits are precision 2.5V shunt regulator diodes. These monolithic IC voltage references operate as a low-temperature-coefficient 2.5V zener with 0.2Ω dynamic impedance. A third terminal on the LM136-2.5 allows the reference voltage and temperature coefficient to be trimmed easily.

The LM136-2.5 series is useful as a precision 2.5V low voltage reference for digital voltmeters, power supplies or op amp circuitry. The 2.5V make it convenient to obtain a stable reference from 5V logic supplies. Further, since the LM136-2.5 operates as a shunt regulator, it can be used as either a positive or negative voltage reference.

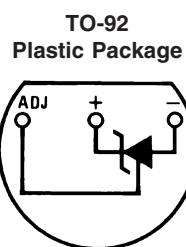

The LM136-2.5 is rated for operation over -55°C to $+125^\circ\text{C}$ while the LM236-2.5 is rated over a -25°C to $+85^\circ\text{C}$ temperature range.

The LM336-2.5 is rated for operation over a 0°C to $+70^\circ\text{C}$ temperature range. See the connection diagrams for available packages.

Features

- Low temperature coefficient
- Wide operating current of $400\ \mu\text{A}$ to $10\ \text{mA}$
- 0.2Ω dynamic impedance
- $\pm 1\%$ initial tolerance available
- Guaranteed temperature stability
- Easily trimmed for minimum temperature drift
- Fast turn-on

| Long Term Stability | T _A =25°C ±0.1°C, I _R =1 mA, t = 1000 hrs | | 20 | | | 20 | | ppm |

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Electrical specifications do not apply when operating the device beyond its specified operating conditions.

Note 2: For elevated temperature operation, T_j max is:

LM136 150°C

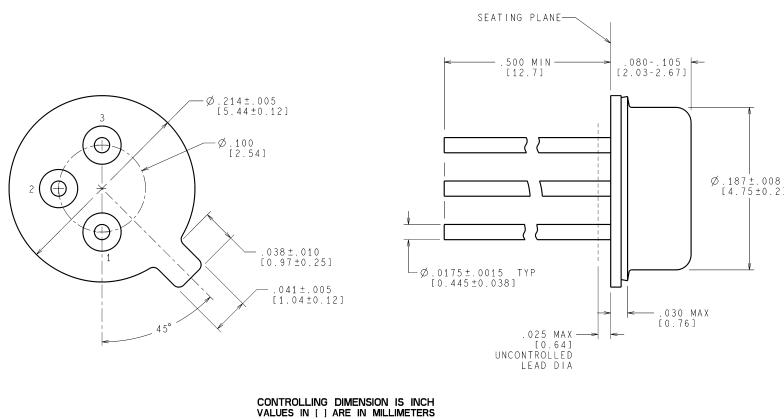

LM236 125°C

LM336 100°C

| Thermal Resistance | TO-92 | TO-46 | SO-8 |
|---------------------------------------|---|---------|---------|
| θ _{ja} (Junction to Ambient) | 180°C/W (0.4" leads) 170°C/W (0.125" lead) | 440°C/W | 165°C/W |
| θ _{jc} (Junction to Case) | n/a | 80°C/W | n/a |
