

### SNAP PAC Learning Center

SNAP-PACLC

---

The SNAP PAC Learning Center is a fully functional, complete package of Opto 22 hardware and software that provides everything you need to learn about Opto 22's SNAP PAC System. The Learning Center includes **PAC Project Basic** software, a **SNAP-PAC-R1** rack-mounted controller, SNAP I/O modules and mounting rack, and a load panel with digital and analog sensors and actuators (switches, LEDs, a temperature probe, a meter, and so on).

The included step-by-step tutorial guides you through the hardware assembly and software installation and gives you hands-on programming experience with the PAC Project software. You will configure I/O points, read and write to those points, create several flowcharts as part of a control strategy, and build a graphical user interface.

Because the SNAP PAC Learning Center consists of the same field-proven, real hardware and software used by Opto 22 customers all over the world, you'll be able to apply not only the knowledge you've learned, but also the actual Learning Center hardware and software in your next automation project.
