Custom Guardsman Tool Cases

Platt's Patented Guardsman ATA Tool Cases are built to exceed the exacting ATA shipping requirements. They have been tested and approved to ATA 300 specs.

They're constructed from an *ultra-durable (yet light-weight) HMW polyethylene material* with your choice of seven standard colors. They're *line bent to assure uniform thickness and unsurpassed strength*. By using polyethylene, these cases are *up to 50% lighter* than traditional wood transit cases, and because they are bent instead of formed, all corners and edges are the same thickness as the rest of the case, thereby eliminating the traditional weak spots associated with other materials.

Polyethylene can be stored in any environment from -40° to 140° and is unaffected by all common industrial solvents. Plus, our bent aluminum continuous framing system provides the ultimate in strength, and attractive appearance. Our valance system has a gasket for water/dust resistance. Platt uses completely recessed hardware which further resists damage in transit and can be furnished with combination locks or key locks in the latches.

These cases are also available as a *Jetalum™* all aluminum construction.

Platt's Engineering Department will assist you in the design of your Guardsman ATA case. Pallets and interiors can be customized to hold your selection of tools.
