## General Information for Enabling Switches

### Safety Precautions

- In order to avoid electric shock or fire, turn power off before installation, removal, wire connection, maintenance or inspection of switch.
- Follow specification when installing. Improper electrical load may damage switch, cause electric shock, or fire.
- Use proper wire diameter to meet voltage and current requirements. Using improper wires or incomplete soldering may cause fire due to abnormal heat generation.

### Installation Precautions

#### HE2B

- M3 nut is inside the rubber cover.

#### HE2B/HE3B

- A change in internal air pressure may cause the rubber boot to expand and shrink on an enabling switch that has the rubber boot sealed. This may affect the performance of the switch. Periodically check to ensure that the enabling switch is operating correctly.

- If the panel is not level when mounting an enabling switch, the waterproof feature cannot be guaranteed.

#### HE3B

- The rubber boot has a tab to be used for orientation. When making a positioning hole in a panel, do not make a hole in the rubber boot, or the waterproof feature cannot be guaranteed. When the positioning hole is not on the panel, remove the tab, but do not make a hole in the rubber boot.
- When tightening the locking ring, secure the flange to prevent the enabling switch from rotating. In applications where the enabling switch is to be rotated, mount the switch in a recess on the panel as shown.

### Wiring Precautions

#### HE1B/HE2B/HE3B

- Applicable wire size is 0.5mm (maximum) / 1 line.
- When soldering the terminal, solder at a temperature of 260°C within 3 seconds. Use non-corrosive liquid rosin as soldering flux.

#### HE1G

- Wire Striping Information

Wire Length	Terminal No. 1-4	Terminal No. 5-8
L1, L2 (mm)	L1=40mm	L2=27mm
L3 (mm)	L3=6mm	

- Applicable Wire Size: 0.14 to 1.5mm<sup>2</sup> (one wire per terminal)

- Recommended Torque (wire diameter range .276 - .512")

	See Drawing Above	Recommended Torque
Case Installation	A	1.2±0.1N • m
Rubber Installation	B	.09±0.1N • m
Connector	C	3.0±0.3N • m
Strain Relief	D	6.0±0.3N • m
Wire terminals	E	0.3±0.2N • m
Do Not Remove	F	-

The above values apply when using IDEC strain relief. If using other, contact manufacturer.

### Use Precautions

#### HE2B/HE3B/HE1G

- To ensure the highest level of reliability connect both contacts to a monitoring device such as a safety relay.

#### HE1B/HE2B/HE3B

- When installing the enabling switch ensure that it cannot be accidentally activated. For example, a protrusion from a teaching pendant could cause the enabling switch to be activated by the weight of the teaching pendant.
