

F36-170

Description:

The F36-170 is a single primary and dual secondary, split bobbin design which operates with an input of 115V. The output voltage will be either 36.0V with a center-tap under a 0.17A load with the secondaries wired in series, or 18.0V under a 0.34A load with the secondaries wired in parallel. The split bobbin design eliminates the need for costly electrostatic shielding.

:: Description

The Triad Split Pack split bobbin transformer is an extremely versatile tool for PC board applications. Split Pack transformers are nonconcentrically wound -- with primaries and secondaries side-by-side. Unlike the secondary-on-top-of-primary designs of standard PC board transformers, the split bobbin winding and low capacitive coupling eliminate costly electrostatic shielding. It is offered in a dual secondary configuration with either single or dual primaries.

:: Specifications

Primary: 115 V, 50/60 Hz | **VA Ranges:** 1.1 to 36.0

Secondary: Series - 10 to 120 V; Parallel - 5 to 60 V
