Material

Excellent for installation within an enclosure enabling access to wire entry and screw from the outside. The profile of the block makes a neat tight fit with the enclosure walls. An offset of 0.5 mm (0.02 in.) deep by 4 mm (0.16 in.) wide, above the screw entry can be mated with correctly sized opening in an enclosure. The opening can be about 14.5 mm (0.57 in.) high by the width of the terminal block, this allows access to the face of the block and its screws and wire entries.
